

LETTER OF RECOMMENDATION

It gives me immense pleasure to recommend Ms. Harsita Rajendren as a student for a graduate program at your esteemed University. I have known her for two and half years as an undergraduate student of Bachelor of Technology, Computer Science Engineering at SRM University of Science and Technology. I was her professor for Advanced Programming Practices, Formal Language & Automata, and Natural Language Processing, and thus, had several opportunities to gauge her skillset. I also guided her through her major project titled "Detecting Fake Job Posting Using ML Classifications and Ensemble Model". I would like to state a few characteristics of her that impressed me the most. Harsita possesses a "ready to learn" attitude, doesn't hesitate to ask questions, and she always cleared any doubts that she had. She always proved her curiosity to learn and grasp the concepts taught in class. She was quick to answer any questions, be it offline or online. When I first taught her about how to summarize text, she was excited to apply it and experiment with it. Her project on "YouTube Transcript Summarizer" was appreciated by many for her creativity and application of summarizing text. She doesn't hesitate to explore new fields like flask, and API calls that she used in this project. By the time she reached her final semester, she had recognized her strengths and weaknesses.

In the main project 'DETECTING FAKE JOB POSTING USING ML CLASSIFICATIONS AND ENSEMBLE MODEL' that I guided her, I saw her grow the most when compared to her peers. In the project, she didn't hesitate to take a leadership role and coordinated with her peers. Although it was during COVID-19, she managed to communicate well with her teammates and kept me informed. If there was a delay in progress, she never hesitated to recognize her and her team's mistakes and address them. Furthermore, she along with her peers presented a paper on the same at the Virtual International Research Conference organized by SRM University of Science and Technology, Chennai. While working on her project, Harsita also interned at HP Inc. She always reported to me on time and never fell behind in her internship. Her grades were above A grade. On top of that, she secured a first rank in her 4th semester.

Harsita is not only academically smart but also shows interest in other activities that the university provides. For example, she was a member of the White Hat Hackers (ethical hacking) club, and she participated in every chess competition that was held. Her passion for chess is impeccable, when she was just a freshman, she helped her seniors arrange an in-house chess competition and helped with tracking down the results of each game. Furthermore, she consistently lent her support in organizing events such as Independence Day and the annual day, while maintaining a strong rapport with all her teachers and demonstrating deep respect for them.

She is mature, adaptive, and can handle tough situations. Her active participation in volunteer work reflected her empathetic nature and her concern for her fellow beings. She has the right skills and mindset to share and learn. I am confident that her determination and hard work will help her achieve her dreams. I have no reservations to recommend Harsita to your master's program and wish her luck in all future endeavours.

Sincerely,

Niveditha S

Assistant Professor – Department of Computer Science and Engineering

SRM Institute of Science and Technology

Vadapalani, Chennai – 600026
